### 1 Inductive And Deductive Reasoning

Inductive Reasoning Inductive reasoning is the exact opposite of deductive reasoning because it does not rely on solid evidence to form conclusions. When we use inductive reasoning, the propositions used are strong evidence for a certain conclusion, but a certain amount of guessing is necessary.

### The Difference between Inductive and Deductive Reasoning ...

In inductive reasoning, the argument supporting the conclusion, may or may not be strong. On the contrary, in deductive reasoning, the argument can be proved valid or invalid. Inductive reasoning moves from specific to general. Unlike, deductive reasoning moves from general to particular. In inductive reasoning, the inferences drawn are probabilistic.
