Android Style Guide

Blog posts. Styles and themes on Android allow you to separate the details of your app design from the UI structure and behavior, similar to stylesheets in web design. A style is a collection of attributes that specify the appearance for a single View . A style can specify attributes such as font color, font size, background color, and much more. A theme is a collection of attributes that's applied to an entire app, activity, or view hierarchy—not just an individual view.

To understand the concept related to Android Style, you can check Style Demo Example. Style Inheritance. Android supports style Inheritance in very much similar way as cascading style sheet in web design. You can use this to inherit properties from an existing style and then define only the properties that you want to change or add.

This document serves as the complete definition of Google's Android coding standards for source code in the Kotlin Programming Language. A Kotlin source file is described as being in Google Android Style if and only if it adheres to the rules herein. Like other programming style guides, the issues covered span not only aesthetic issues of formatting, but other types of conventions or coding standards as well.

The HIDL code style resembles C++ code in the Android framework, with 4-space indents and mixed-case filenames. Package declarations, imports, and docstrings are similar to those in Java, with slight modifications. The following examples for IFoo.hal and types.hal illustrate HIDL code styles and provide quick links to details on each style (IFooClientCallback.hal, IBar.hal, and IBaz.hal have been omitted).

Android should always be capitalized and is never plural or possessive. "Android", or anything confusingly similar to "Android", cannot be used in names of applications or accessory products, including phones, tablets, TVs, speakers, headphones, watches, and other devices. Instead, use "for Android".

Brand guidelines | Google Play | Android Developers

Design for Android Android users expect your app to look and behave in a way that's consistent with the platform. Not only should you follow material design guidelines for visual and navigation patterns, but you should also follow quality guidelines for compatibility, performance, security, and more.

Android Developers

Dark theme applies to both the Android system UI and apps running on the device. There are three ways to enable Dark theme in Android 10 (API level 29) and higher: Use the system setting (Settings -> Display -> Theme) to enable Dark theme. Use the Quick Settings tile to switch themes from the notification tray (once enabled).

According to the Android code style guide, the standard practices for some of the predefined annotations in Java are: `@Override`: The `@Override` annotation must be used whenever a method overrides the declaration or implementation from a super-class. For example, if you use the `@inheritdocs` Javadoc tag, and derive from a class (not an interface ...
