Antenna Measurement Theory 1 www.orbitfr.com Introduction to Antenna Measurement 1. Basic Concepts 1.1 ELECTROMAGNETIC WAVES The radiation field from a transmitting antenna is characterized by the complex Poynting vector $\mathbf{E} \times \mathbf{H}^*$ in which \mathbf{E} is the electric field and \mathbf{H} is the magnetic field. Close to the antenna the Poynting vector is imaginary

Hi, I am using a VNA for radiation pattern measurements in an anechoic chamber. To get a better dynamic range I reduced the IF bandwidth. However when I do this, I am facing a small issue . For an antenna I am getting the following results: -37 dB for co polarization and -44dB for cross polarization with an IF bandwidth of 1kHz. However with a higher IF BW, these jump to about -42 and -55 ...
